CISC 825  
Paradigms of Wireless and Mobile Networking

Marking Scheme

Presentation and Report (30%)  
Project Implementation and Report (40%)  
Term Exam (30%)

Elaboration on Deliverables

1. For all deliverables, all source files must be provided.  
2. Deliverables are to be submitted by email to the instructor. The email subject should contain an identification of the student and the deliverable. (e.g. your name, project report)

Report & Presentation

The objective of this segment is to evaluate your capability to understand and relay an assigned topic. The mark in this segment will be divided by a 15% dedicated to the presentation of the assigned module and a 15% dedicated to a report on the subject.

In both the presentation and the written report, especially when going over or comparing proposals for different authors or approaches, you are expected to be critical in your presentation. Also, proper citation is expected with regards to all figures, tables or statements that borrowed from other sources.

Deadline for submitting the presentation slides are the Sunday before the presentation date. All reports are due April 7th.

Project Implementation, Presentation and Report

You’ll be assigned a specific point of investigation to be made through simulation (typically using ns-3). Projects will be announced on Week 7.

The report is to take the form of a two-column, IEEE format paper. The paper length should not exceed 8 pages. The paper should elaborate on the motivation, the undertaken approach, the simulation setup and results, in addition to the relevant references.

The paper should be submitted no later than April 17th. You should also submit your program code and test procedure.

The implementation and paper will be marked at 20% each. No marks will be awarded for submitting the plan; however, it must still be submitted.

Term Exam

A take home exam will be handed out February 16th and is due February 17th. Questions in exam will stem from material learned through the course.
